Projects

[iOS/iPadOS Weather App GitHub](#)

This project helped me apply what I learned from courses and get familiar with the latest Technologies currently being used for Front End Web Development. Integrating APIs, collecting data, and displaying it in a user friendly and visually appealing format.

Technologies used: Nextjs 14, TailWind CSS, Zustand, TanStack Query V5, Framer Motion, Custom Hooks and TypeScript.

[Business Landing Page GitHub](#)

Took a professional design from dribbble and turned it into a real site. This project solidified my understanding of modern web development practices by including component-based architecture, form handling, animations, responsive design, type safety, state management and server-side rendering.

Technologies Used: Nextjs 14, TailWind CSS, Zustand, ShadCn Ui, Framer Motion, TypeScript, Zod, React-Hook-Form

[ChatGPT GitHub](#)

Recreated OpenAI's ChatGPT chat. I got familiar with using Nextjs app router and implementing authentication with middleware to prevent users from bypassing authentication. This was also a good introduction to Firebase by saving user's chats and attaching it to an Google account.

Technologies Used: Nextjs 14, TailWind CSS, Framer Motion, Authjs V5, Firebase, TypeScript, Zustand, OpenAI, and React Hot Toast
