Projects

IOS Weather App Recreation

Developed a comprehensive weather application using Next.js, React, and TypeScript. The application provides real-time weather updates based on the user's current location or a user-specified location. Key features include:

- Implemented a location search feature using the Mapbox API, allowing users to search for weather information in different cities worldwide.
- Data is fetched using custom hooks and React Query.
- Utilized React Context API for state management across components, specifically for handling the currently displayed location.

Todo App

Developed a responsive Todo application as part of the Frontend Mentor challenge. The application is built using modern web technologies including React, Redux Toolkit, and TypeScript. It features a user-friendly interface that adapts to different screen sizes, providing an optimal layout for both mobile and desktop devices.

- Users can add, mark as complete, and delete todos from the list..
- The application also supports filtering todos by all, active, or completed states, and allows users to clear all completed todos.
